

### Respected Throughout the World

Based in the UK, Esterlam are Global Leaders providing clear Doctor Blade solutions for today's demanding printed and coated electronic applications. Working closely with Leading OEM's incl. Mathis AG and Converters around the world, Esterlam have developed a unique range of products and a technical database unparalleled in the industry. Combined with a full technical support programme and friendly customer service Esterlam are more than just doctor blades, we are the future of doctor blades.

Utilising the latest developments in advanced polymer technology, Esterlam's innovative E Series blade designs create improved spring characteristics giving you greater consistency and control over coat weights from start to finish of your run. Greater control means less wastage, increased yields and improved productivity. Their self-lubricated qualities mean longer blade life with abrasive ceramic and graphite applications, plus significant reductions in roller wear and scoring. Available with a choice of profiles to optimise your process, Esterlam E series doctor blades are setting new standards in electronic coating technology.

- Improved consistency and control of coat weights
- Ceramic and graphite coating
- Self lubricated for longer blade life
- For battery separator production
- Significant reductions in roller wear, scoring and damage
- Improved safety for operators
- Improved chemical and thermal characteristics
- Eliminate steel blade particle contamination
- Full technical support and backup programme
- Worldwide availability for fast delivery
